## Students protest poor classroom conditions

By Holly Vanderlaan  
Staff Writer

About 40 students marched into President Warren Baker's office Tuesday afternoon holding signs above their heads and chanting, "we can't breathe, we can't hear and we can't learn."

Students said they were steaming mad about the conditions in Business Administration/Education building, room 214 due to the construction on the building's addition.

Baker arrived about 15 minutes after the demonstrators showed up and was confronted by Geoff O'Quest, a political science junior, the designated spokesperson for his Political Inquiry class (POLS 100), taught by Bud Evans.

"The environment as far as learning and teaching goes is intolerable," O'Quest told Baker. "It's too noisy... the fumes, the heat. It's too hot to pay attention."

Baker responded with "we'll look into changing locations of the classes."

That was not the answer the students wanted to hear. About 20 of them responded with "we've heard that one before."

Baker's answer was, "We'll close them down, not use them and find another place."

The students applauded upon hearing Baker's response.

Baker, however, did not say when the classrooms would be closed or where the classes would be relocated.

"I hope we can get them out right away," Baker said. "We don't know where yet, but I think we're going to have to close the rooms."

Baker said before closing the rooms, he must discuss the situation with Frank Lebens, interim vice president for Business Affairs. Lebens was also present at the protest.

"Sweat was dripping off me," O'Quest said. "We can't open the windows because of the dust and fumes."

Other students complained of similar problems.

"I got physically sick after one

## Engineer group charges ahead on car made to replace unleaded gas guzzlers

By Scott Abbott  
Staff Writer

Take a drive through any of California's major cities, and it's not too difficult to notice one environmental problem that people will be combating during the 21st century — air pollution.

While the brownish haze is often a combination of pollutants including industrial emissions and solvents in the air, the major contributor to

the world's air quality problems is the automobile, according to the California Air Resources Board.

While unleaded gas and high-mileage cars are designed to cut down on pollution, they are not the ideal solution. The ideal solution would be a car that has no exhaust, is cheap to maintain and is free of many of the mechanical problems that afflict today's gas-burning engines. If this car sounds like something from the future, it

is. And the future is about five months away.

Cal Poly's Sun Luis Project, a group mostly made up of engineering students, has been designing and building the Solstice electric commuter car since last winter. The car, to be completed in March, is designed to be a practical alternative to the gas burning cars of today.

The Solstice, about the same size as a Honda CRX, is a two-

## Poly earns top ranks in U.S. News report

### Admissions called most challenging of 140 colleges in Western Region

By Carolyn E. Nielsen  
Staff Writer

Cal Poly students can pat themselves on the back, according to a U.S. News and World Report article.

Out of the top 140 universities in the Western Region, Cal Poly is listed in the Sept. 30 issue as the hardest school to get into.

To boot, Cal Poly is also the second best buy, according to U.S. News' book "America's Best Colleges."

In the Western Region, Poly placed 13th overall and third for public schools in that category, just behind the University of Alaska at Fairbanks and the University of Colorado at Denver.

Scores were based on academic reputation, selectivity of the student body, financial support for the faculty, the school's overall financial resources and the level of student satisfaction as measured by the university's ability to graduate students it admits as freshmen.

Overall, Cal Poly was the only non-private California school in the study's top 15.

Cal Poly, however, did fare well in financial resources, placing 55th.

"We can't do much about our financial resources, but we can

work with our student satisfaction," Koob said in response to Poly's 51 percent student satisfaction score. "We challenge students to help bring us up."

Chris Penner, a member of the student-alumni organization, Poly Reps, said that he thinks Cal Poly has a positive atmosphere and that most students are generally happy here.

In academic reputation, Cal Poly moved up two spots from last year to take second place behind Trinity University, a private school in Texas.

Koob said Cal Poly's reputation is highly deserved.

Penner, a social science senior, said Cal Poly's reputation is widely known.

"When people where I worked this summer at Apple Computers heard I went to Cal Poly they were really receptive and had good things to say," he said.

Penner said that when he gives campus tours to parents, they come with high expectations.

"This is a prestigious academic school in a peaceful community," Penner said. "Parents are impressed with facilities, and they want their kids to go here."

## Leningrad changes name with little ado

ST. PETERSBURG, U.S.S.R. (AP) — This former home of Russian czars formally regained its old name Tuesday, but residents seemed more concerned with empty food shelves than with bidding adieu to Leningrad.

The city's 5 million residents voted in June to change back to St. Petersburg, and the Russian federation set Oct. 1 for the official changeover. Local leaders, who have been calling the city St. Petersburg for weeks, said it was an arbitrary date and scheduled no ceremonies Tuesday.

City Council spokesman Alexander Veratin said name change ceremonies might still be held Nov. 7, in place of the traditional military parade marking the anniversary of the 1917 Bolshevik Revolution.

## China honors 42 years of Communist rule

BEIJING (AP) — The leadership of China's 3 million-strong army affirmed its loyalty today to the ruling Communist Party as the nation celebrated the 42nd anniversary of Communist rule.

The army's loyalty to the party has become a concern among top party leaders since August, when the Soviet army ignored orders and did not support a hard-line coup in Moscow, allowing it to fail. China's leaders quickly ordered loyalty checks of senior government and army officials.

"The people's army always will be the loyal defender of the socialist motherland," proclaimed an editorial in the Liberation Army Daily newspaper.

## U.S.-Soviet open talks to cut nuclear weapons

WASHINGTON (AP) — The United States and the Soviet Union are ready to open talks to implement President Bush's proposal for deep cuts in nuclear weapons stockpiles, the State department announced today.

And the Bush administration would be willing to discuss with the Soviets their proposal that all nuclear weapons tests by the two nations be discontinued, U.S. officials said.

"We would be in a position obviously of listening to whatever they come back with," Margaret D. Tutwiler, the State Department spokeswoman, said.

## Congress sets to give jobless \$6.4 billion

WASHINGTON (AP) — The Senate and House are prepared to send President Bush a \$6.4 billion measure extending benefits for Americans who have been out of work the longest, setting the stage for a likely veto fight.

Senate Republicans forced a test vote scheduled for today in which, for procedural reasons, Democrats will need to find 60 votes to keep the measure alive.

But even GOP lawmakers conceded the Democrats would prevail, and both chambers of Congress were expected to send the measure to the White House by day's end.

"The administration will put on a full-court press, but I'm optimistic we'll get it," chief sponsor Sen. Lloyd Bentsen, D-Texas, said Monday.

## Gay right activists have 12 weeks to fight veto

SACRAMENTO (AP) — Gay rights activists have only half the normal time to collect signatures to put an initiative on the presidential primary ballot next June to overturn Gov. Pete Wilson's veto of AB 101, a bill banning job discrimination against gays, election officials say.

State law allows 150 days to gather signatures, but since the law also gives officials over five months to verify signatures, collect supporting and opposing ballot arguments and print and distribute ballots, the petition deadline for the June 2 primary is Dec. 24, just 12 weeks from now.

## Landfill death brings new safety regulations

SAN MARCOS (AP) — State investigators found no safety violations contributing to the death of an Escondido trash collector who was buried under garbage at the San Marcos landfill, officials said.

San Diego County officials have ordered several new safety rules to help prevent another such accident.

Guillermo Ceseno, who worked for Escondido Disposal, was crushed beneath 6 feet of garbage on Aug. 8 after he opened the back doors of a trash truck at the dump. The driver said he thought Ceseno was standing off to the side under normal procedures when the trash was dumped.

Under the new rules, when garbage workers operate in pairs, both workers will be required to be in the truck when it dumps its load or moves around the landfill.

## Column keeps students aware of ASI issues

At a time when the students of Cal Poly will be facing the impacts of major statewide academic budget cuts, proposed tuition increases and other pressing issues in addition to the normal strains of college, it is essential that all students feel comfortable with the decisions that ASI is making. In order for this to be accomplished, it is imperative that everyone understands exactly what is going on.

Every Wednesday, this column will consist of an article submitted by ASI that regards a present or upcoming issue that every student should know about. This column exists purely to benefit the general student body. It will be an unbiased illustration of an issue, consisting of some background information, a summary of the issue, some pros and cons with respect to the issue and

## Police chief: party did not damage relations

By Debbie Aberle  
Staff Writer

The large street party on Murray and Hathway streets which required about 60 police officers to control Saturday night has not severely damaged relations between Cal Poly students and the community, said San Luis Obispo Police Chief Jim Gardiner.

Although the back-to-school party got out of hand, "it was not atypical of what the police have dealt with in previous years," Gardiner said.

In addition, Gardiner said he did not think this incident has "killed" the positive efforts Cal Poly students have made towards improving community relations after the 1990 Poly Royal riots.

"I would not characterize this party as having any nexus to Poly Royal," Gardiner said. "There are a number of groups like the Liaison Committee that have been working real hard to bridge gaps and open lines of communication."

"Events like Neighborhood Cooperation Week, which is coming up at the end of October, is a great opportunity for residents and students to come together, and a lot of positive things have occurred subsequent to Poly

**"I would not characterize (that) party as having any nexus to Poly Royal."**  
— SLO Police Chief Jim Gardiner

Royal," he said.

San Luis Obispo City Councilman Bill Roalman has a different opinion of the incident.

"This was no back-to-school party. Throwing beer bottles at cops is completely intolerable," Roalman said. "I just spoke to a guy with a black eye who happened to be there and was hit by a flying bottle."

Roalman said he receives numerous calls throughout the year from extremely irate San Luis Obispo residents.

"They don't appreciate paying tax dollars for the extra police manpower needed to control parties like this," he said.

Gardiner said, "If you're in the middle of a crowd like this, and you see someone about to throw a bottle, it is my hope that you'd take the action to police yourselves."

## Poly construction on schedule

New additions should meet all work deadlines

By Amy Alonso  
Staff Writer

Although there have been complaints about classes being disrupted, building construction around campus has made a successful transition into fall quarter as far as deadlines are concerned.

Deadlines set for summer work on the remodeling of the Business Administration and Education building and Engineering East were met. "I had an accelerated heart beat, but things were completed on time," said Frank Lebens, interim vice president for Business Affairs.

"We're off to a pretty good start considering everything that had to fall in place in a timely way did, which is due in a large way to the extraordinary moving crews working in conjunction with the contractors to make it all happen."

"Those two facilities were extremely critical to us in order to maintain access for instructional purposes during the year," Lebens said. There was a See CONSTRUCTION, page 11

## Should abortion continue to be legal in the United States?

### PRO

#### Submitted by SLO County Planned Parenthood

Planned Parenthood believes that:

- The decision to have an abortion is a matter of personal choice.

- A woman should not be required to obtain the consent of a spouse, a parent, a court, or any other person or institution as a prerequisite for obtaining an abortion.

- No one should be denied abortion services solely because of her age or her economic or social circumstances.

- Public funds should be made available to subsidize the cost of abortion services for women who depend on government programs for their health care.

- The need for abortion can and should be reduced by increasing the availability of contraceptive services to all who want them; by expanding sexuality education; by evolving societal attitudes to promote more realistic and accepting attitudes toward sexuality and greater male involvement in, and responsibility for, family planning; and by committing increased funding and support for research to develop new and more effective contraceptive methods. However, even with these advances, abortion will remain necessary under certain circumstances and must remain safe, legal and accessible.

Anti-abortion extremists have failed in their attempts to once again criminalize abortion. Many have resorted to misleading and inaccurate propaganda, harassment and violent attacks against family planning and abortion clinics, patients and staff.

Legalized abortion has dramatically reduced the number of abortion-related deaths in this country - from 90 in 1972 (before Roe v. Wade) to 16 in 1980. Today, legal abortion is five times safer than childbirth.

A reversal of Roe could allow Congress to enact legislation banning it nationwide. Even without such a reversal, a realigned Court could significantly erode abortion rights.

History has shown that women everywhere, in every age, have sought abortions - even when they risk their lives to do so. A return to the dark ages before legalized abortion in this country would mean a return to widespread, needless suffering and death.

Moreover, outlawing abortion would further victimize the troubled poor in our nation; affluent women will simply seek the services they need through expensive, illegal providers in the U.S., or by traveling to countries where the procedure is legal.

*The information above was submitted by Carlyn Christianson, director of SLO County Planned Parenthood, and was produced from Planned Parenthood files.*

### Commentary Policy

Commentaries, reporter's notebooks, pro/con articles and letters to the editor do not necessarily reflect the views of Mustang Daily. Unsigned editorials are based on the majority opinion of the editorial staff.

Commentaries should be between one and three pages long and should include the author's name, phone number and major or occupation.

### ABOUT THE ISSUE

## Abortion

In 1973, the United States Supreme Court, in its landmark Roe v. Wade ruling, recognized the woman's ability to have an abortion as a constitutional right.

As our Supreme Court leans more towards the right with the addition of three conservative justices in the last five years (Justice Thomas in 1991, Justice Souter in 1990 and Justice Powell in 1988), changes in the present national abortion laws in the near future are a significant possibility.

Already this year, the Supreme Court ruled that individual states could dictate their own abortion laws. In addition, federally funded clinics cannot recommend abortions to pregnant women.

It is possible to get a legal abortion during the full nine months of pregnancy. In 1990, 91 percent of all abortions were performed in the first trimester.

The fetus' heart begins to beat at about 18 days and brain waves are detected at about 40 days.

There have been over 20 million abortions since abortions were legalized in 1973, and the present rate of abortions is just under 2 million every year.

State-funded abortions, paid by Medicaid, are provided in 14 states.

The last major abortion case settled in the Supreme Court was Thornburgh v. A.C.O.G. in 1986. In this case, abortion rights were reaffirmed with a five-to-four majority.

## Abortion

### CON

#### By Erik Axtell and Stacey Cunningham

Abortion - an act of violence to the woman and to the pre-born child is the most common surgical procedure performed in the United States. More abortions are performed than heart surgeries, circumcisions or any other operation. According to the Alan Guttmacher Institute there were 1,588,600 abortions performed in 1985 and some speculate that the number of abortions occurring now is close to 2 million per year. In some cities, such as New York, there are more abortions taking place than live births.

Many do not know that abortion is currently legal for the full nine months of pregnancy or until birth, for any reason or no reason at all, and in many cases our taxes pay for it. No parental or spousal consent is required - even minors who are not mature enough to buy tobacco or beer, vote or join the army and who need parental permission to get aspirin at school are deemed responsible enough and able enough to make a decision to end an unborn baby's life through an abortion.

Indeed, the essential question on which the abortion debate pivots is whether the unborn baby is human life. All other arguments are superficial and meaningless compared to this question. If what is inside the mother is a mere "piece of tissue" or "glob of cells," then our society is certainly justified in treating the unborn the way we do. Yet if we discover that the unborn is human life, then it deserves a paramount right of life, liberty and the pursuit of happiness which our constitution guarantees - and no economic, social or emotional reason would justify the extermination of 2 million unborn babies per year.

If your answer to the question is "no," you should take an honest look at the incredible advances in medicine during the past 10 years. Scientific evidence is overwhelmingly clear in favor of the humanity of the unborn. From the time of conception when only a single cell exists, science has shown that a completely unique human being is formed which is either male or female and has 46 human chromosomes that determine all the genetic characteristics like height, eye and hair color. The unborn baby is dependent upon his or her mother for shelter and food, but in all other respects it is a totally new, different, unique and independent being.

If you still doubt that human life begins at conception, ask yourself this question: did you "come from" a fertilized ovum? No, you once were a fertilized ovum who grew and developed into the adult you are today. Nothing has been added to the fertilized ovum who you once were except nutrition.

The best way to determine the humanity of the baby is to look for yourself at an ultrasound of an unborn baby while he or she is still alive in the womb - I guarantee you will never see this beautiful human being as a "glob of cells" again.

It is easy to be persuaded by emotional arguments in favor of abortion, yet when one studies the facts which point directly towards the humanity of the unborn, the inalienable right to life of the unborn baby is very clear. All other arguments become meaningless when you discover how truly incredible and unique the unborn baby is. We should protect the rights of all individuals in this country and not be prejudiced based on age or place of residence. As Greg Cunningham from the Center of Bioethical Reform states, "Ignorance, born of denial, is paralyzing this nation on the issue of abortion." As the future decision makers of this country, we need to make informed judgments on abortion and rise above the inflammatory rhetoric which detracts from the real issue - the unborn baby is a human being and deserves to live!

If you are faced with an unexpected pregnancy, call Alpha Crisis Pregnancy Center and experience people who love and care for you and your unborn baby. They also offer counseling for those who have had abortions.

*Erik Axtell and Stacey Cunningham are Cal Poly students and members of Cal Poly Christians for Life.*

# Good Neighbors. . .

## Resident/student BBQ molds good neighbor relations

Sometimes being a good neighbor means picking up someone's mail if they go away for the weekend, or watering their yard. Other times it means informing others about a party and keeping the noise level down as the night goes on.

But for Tom and Audrey Smith being good neighbors goes beyond even this.

"There is something that goes along with being neighbors and being friends, and that is respect," said Tom, a retired manager of the County Employee Association.

The Smiths have lived on Hermosa Way in San Luis Obispo for 19 years. They said they have always had good relationships with their student neighbors, but it has taken a little work.

Each fall, the Smiths send out invitations to their new student neighbors inviting them to a "get together with your neighbor" event. This year it was a steak barbecue and, like their past neighborhood get-togethers, the Smiths said, it was a success.

"Students are reluctant to meet their neighbors, so we decided early on, about 15 years ago, to make the effort, and it has always been great," Tom said.

Audrey said, "Eighteen of our 22 student neighbors showed up, as well as some of our permanent

By  
Lori  
Cheeseman

neighbors."

Audrey, a retired secretary for Cal Poly's economics department, talked about her new neighbors and friends with a motherly pride.

The Smiths said the barbecue was a fun way to get to know their neighbors. They exchanged phone numbers and encouraged the students to call if they had any problems, were planning a party or just wanted to visit.

"Invariably, the first week of school is a party time, and students like to party. We have parties all the time too," Tom said.

The Smiths ask the students to act responsibly with their parties and keep them closed and in control.

"The important thing is that you let your neighbors know what is going on," Tom said. "It has always been a problem in our neighborhood that people have called the police too quickly, and it could have been resolved among ourselves."

The Smiths said they often act

as intermediaries between student neighbors and permanent neighbors when they have a conflict.

"We have established ourselves as the guardians of the neighborhood," Tom said.

Audrey said the relationships are not one-sided. Over the years, their student neighbors have watched over their house when they were on vacation and helped them out with difficult jobs. She said they have learned as much from the students as the students have learned from them.

Both Tom and Audrey recommend their "Good Neighbor Plan" to other permanent resi-

dents of San Luis Obispo.

Their "plan" has not gone unnoticed by the community. Dotty Conner, chairperson of Residence for Quality Neighborhoods, learned of the idea after seeing the letter and invitation printed in the Telegram-Tribune. Intrigued, she called the Smiths to get more information.

"I thought it was a positive way to handle things," Conner said. "I really wanted to point out a positive approach to some of the members. A way to open a door of communication and foster

seems to work."

Gary Ducharme, a graphic communications sophomore, was surprised by the invitation to come to a barbecue at an permanent resident's home. He said he feels fortunate to have the Smiths as neighbors during his first year living off campus.

"We weren't really expecting them to be so friendly, but they made us feel very welcome," Ducharme said.

"We told them we were having a party over the weekend, and they told us to call if we had any

JON ROGERS/Mustang Daily

## Poly ranks third in CSU system for private gift, donation dollars

### Corporate, private sponsors gave \$10.4 million in '90

By Laura Carrillo  
Staff Writer

Despite the seemingly endless burdens of budget frustrations, not all the news coming out of Cal Poly has been bad. Officials say there is a bright side.

"Cal Poly receives more money from parents than any other Cal State University," said Bob Maners, the executive director of University Development for the CSU campuses.

In a survey of private gifts received in 1990 by 151 public universities across the nation, four CSU campuses led the nation.

San Diego State University ranked first with \$10.8 million, CSU Long Beach was second with \$10.6 million, Cal Poly placed third with \$10.4 million and CSU Fullerton placed fourth with \$7.9 million.

"The reason I believe Cal Poly has received such generous monetary gifts is that it has a lot of specialized

programs, and the alumni are very loyal to the school," said Colleen Bentley-Adler, spokeswoman for the CSU Chancellor's Office.

Adler said that San Diego State University probably beat out all the other CSU schools for the No. 1 ranking because it is the biggest of the universities and has active alumni as well as strong research programs.

The sources of voluntary support addressed were alumni, corporations, non-alumni, foundations and others.

The CSU system receives its greatest amount of private gifts, 53.8 percent, from corporations.

Non-alumni provide 26.4 percent, foundations 7.4 percent, alumni 6.2 percent and other sources 6.2 percent.

"We would like to see more of an impact coming in from parents and alumni," Adler said. "We don't want to be as dependent on state funds as we have been in the past."

Maners said that considering corporate donations, Cal Poly receives the most corporate dollars and equipment in the CSU system.

"Out of the total monetary gifts, \$10.5 million, \$8 million came from corporations, and half of that is donated equipment, products and computers," Maners said.

"The biggest need is for the CSU system alumni to support their institutions," Maners said.

Alumni of CSU campuses donate the fewest number of gifts compared to other public and private universities. The CSU's 6.2 percent falls far short of other public schools' 17.4 percent and private schools' 27.7 percent.

"Cal Poly graduates make as much or more as comparable graduates from Stanford or USC, but yet they fail to support their alumni fund in a comparable manner," Maners said. "I don't know why."

## COMMUTER CAR

From page 1  
 seat, three-wheeled car designed to get about 100 miles to a charge from its 1-foot by 1-foot battery tunnel that runs most of the length of the car.

Aimed at commuters, the Solstice is designed to run 40 to 60 miles, where it will be partially recharged by the sun with the help of a satellite-grade solar cell panel on the top of the car. After it is driven home, it will have to be plugged in and charged overnight for use the next day.

The Solstice's 40 horsepower motor will give the car a top speed of 80 mph with a cruising speed of 55 mph.

The car has a 100-mile range that may seem limiting, said Eric Cusick, project coordinator, but that is something people will have to get used to.

"People aren't always going to be able to drive off to Las Vegas," Cusick said. "People are going to have to change their habits."

Those habits may be changing soon. A California Air Resources Board regulation approved last September requires auto manufacturers who sell more than 5,000 cars per year to convert at least 2 percent of their

automobile companies' willingness to comply with the law.

"The water's really muddy right now," Guillermo said. "I think a lot of companies would rather pay a fine."

Cusick said the Solstice is an effort to demonstrate to the public that car manufacturers are not doing as much as they can to research alternative fuel transportation.

"We're doing this to show them that while the companies are complaining (about building alternative fuel cars), we're some snot-nosed students working on a shoestring budget getting it done," Cusick said.

The estimated cost of the Solstice is \$70,000, all of which must be raised from donations. Poly gives nothing to the project except its name, space and tools.

Cusick said about \$10,000 has been raised so far, and donations are always needed.

The cost would come down drastically, to less than \$20,000, if parts for it became mass produced. Now, the motor system alone costs more than \$10,000 because the company that builds it is still paying off research, design and tooling costs, Guillermo said.

However, the motor may be a bargain right now even with its high price. Guillermo said one electric motor will be able to run for as much as one million miles before having to be replaced.

"A lot of the cost is design," he said. "It (the motor) is just copper and magnets. There's just so little to go wrong. It's so weird to think about having a car without the problems of a car. It's going to be a culture change."

The Solstice, now only a cardboard and plywood model, will be high-tech and experimen-

tal in order to increase strength and save weight when it is completed. The car's body will be made of an aluminum honeycomb-covered material in a kevlar and carbon fiber shell, and fiberglass springs will be used in the front to cushion the ride.

In addition, Sun Luis Project

**"There's just so little to go wrong. It's so weird to think about having a car without the problems of a car."**  
**— Carlos Guillermo, team leader**

members are trying to work out a deal with an Austin, Texas company to test a prototype of a more efficient kind of battery.

Not all aspects of the Solstice, however, will be on the cutting edge of technology. The front suspension, instrument panel and seats are from a totaled GEO Metro donated by Sierra Auto Dismantling of Arroyo Grande.

The total weight of the Solstice, including passengers, will be less than 1,500 pounds, compared to the Metro's 1,700 without passengers.

The goal of the Solstice project is not only to be efficient, but marketable as well.

"The biggest consideration was making the car digestible," Guillermo said. "We want it to be something people will buy."

The future of the Solstice includes an exhibit at the Los Angeles Auto Show in January and, eventually, a 200-mile electric car race at the Phoenix International Speedway in March.

## ASI

From page 2  
 possibly a few personal views from ASI members and the administration.

It is the goal of ASI to keep the general student body inter-

ested in all the issues that will be coming up at Cal Poly in the 1991-92 school year through this article. After all, the students at Cal Poly are the biggest governing body in ASI. It is obvious

that this year will run much smoother if the most important members of ASI, the students, stay up-to-date and well-informed on all the issues concerning them.

# Poly pedalers wheel away waste, recyclable items

## Campus Recycling Coalition volunteers empty recycling bins with bikes, trailers

By Carolyn E. Nielsen  
Staff Writer

Thanks to Cal Poly's pedal power, campus waste production is being cut nearly in half.

The Campus Recycling Coalition is in charge of emptying the 65 aluminum and glass recycling bins throughout campus, and they do it without using a drop of gasoline.

Several times a week, three CRC volunteers hop on their bicycles to pull three bicycle trailers around campus to empty the recycling barrels.

Eco-Slo, a local recycling center, picks up the empties weekly at the site behind the campus security building.

Club member Pete Nortman, an electronic engineering graduate student, said that Eco-Slo collects about two tons of recycled material from Poly each year.

"Every pound of cans that is recycled contains the same amount of energy as one gallon of gasoline, but we don't use any gas to collect the cans," he said.

"It was part of our mission to show that 'soft path' things

work," Nortman said, explaining why the club opts for bicycles. "It's very labor intensive, but it's also a lot of fun."

Under a new state law, Assembly Bill 929, Poly must reduce the amount of waste it produces by 25 percent next year, Nortman said. A 50 percent reduction is required by 1995. Nortman said that recycling can be a large part of this.

"Recycling beverage con-

**"It was part of our mission to show that 'soft path' things work."**

**— CRC member Pete Nortman**

tainers would cut waste production by 10 percent or 15 percent, and recycling paper can cut out 30 percent. That is a 45 percent waste cut using recycling alone," he said.

The 3-year-old club started a paper recycling program last spring quarter.

Although the CRC set up the program, it is now being run by the Cal Poly Foundation. The Foundation supplies the bins in the library, department offices and around campus to collect used paper and newspaper.

The CRC, which receives no university funding, began when eight people put out 10 beverage container recycling barrels during Poly Royal in 1988.

They decided that campus recycling was a worthwhile pursuit, Nortman said.

The club then made a presentation to the Foundation, which purchased 10 more barrels for the CRC.

Last year, Nortman coauthored a \$28,000 grant from the California Department of Conservation. Since receiving the grant, the club has increased its membership nearly fivefold and is now responsible for 65 recycling barrels.

Nortman said the money from the grant was used to buy more barrels and to advertise the club.

"The whole idea was to get people interested in recycling and to get new members. We want to be more visible and ac-

STEVE MUELLER/Mustang Daily

The Campus Recycling Coalition has volunteers bicycling away tons of recyclable cans. Eco-Slo collects them from CRC.

cessible," he said. "The club's membership has nearly doubled each year, but with twice as many more people, we could be twice as involved and have twice as much fun."

Nortman said the club has a diverse membership ranging from art majors to engineering majors.

"These people are really involved in participation in solutions to problems. This is not a sit-on-your-butt type club," he said.

The club's vice chair, Carina Carra, a nutritional science senior, said that the recycling profits go into the club's budget.

"It's a lot of work, but we try to make it fun too by having pizza parties and things," she said.

Carra feels that Poly students really do their part to get their cans into the special barrels.

"It feels good to be involved. You really see results. I think people want to recycle, and Poly is really cooperative," she said.

Now that all of the lower campus is recycling, the next target

the club wants to take on is the residence halls.

Nortman said the residence halls have recycling barrels for cans in their lobbies. If they want to do anything beyond that,

**"I think people want to recycle, and Poly is really cooperative."**  
**— Carina Carra, CRC vice chair, nutritional sciences senior**

each residence hall must individually file an application with the administration and renew the permit annually.

Nortman said he would like to see the CRC standardize that application so that it would be easier for residence halls to start up their own programs.

"The residence halls are the last place to get going," he said. "All they need is just a small crew of volunteers to run the program, but there's a lot of red tape to get through."

STEVE MUELLER/Mustang Daily

Recycling beverages could cut Poly's waste production by 10 to 15 percent, a CRC member said.

## President's secretary retires after 40 years with Cal Poly's administration

By Allison Bosselmann  
Staff Writer

In 1951, the Cal Poly administration hired a 20-year-old woman to work as a secretary on campus. Now, at the age of 60, Grace Arvidson is retiring.

Arvidson began her career at Cal Poly as a secretary in a general office. In 1953, she moved out of that position and into the president's office where she remained until her retirement this year.

Officially, Arvidson began her retirement as of Monday. She actually stopped working earlier, on Aug. 9, and has been using ac-

cumulated vacation time until now.

Arvidson has been secretary to three Cal Poly presidents: Julian A. McPhee from 1953-66; Robert E. Kennedy from 1966-79; and Warren Baker since 1979.

"Dr. Baker has been great to work for. I have seen his kids grow up, and I think that is special," Arvidson said. "I think Cal Poly has been very fortunate with its presidents."

Arvidson credits her ability to remain at the university for so many years to a number of factors, the first being that she loved her job.

"It's exciting to have the

perspective from the president's office," she said. "Also, the interaction that you have with the students when you are in a job like that always keeps you young."

Baker appreciated the service Arvidson gave to Poly over her career.

"She truly enjoyed what she did. It was clear that she liked her job," he said. "She's a wonderful person. I will miss her, and so will the university."

Arvidson said she is going to miss Cal Poly, but at the same time is excited about retiring. "Forty years is a long time," she

## Seminar will examine women's studies issues

Cal Poly's first forum on subject will coincide with new minor program

By Minka Parsons  
Staff Writer

Cal Poly's first ever women's studies lunchtime seminar, designed to promote the academic field of women's studies, will be held Monday, Oct. 7.

The speaker, Margaret Camuso, will discuss the nature of feminist research and explain what women's studies is all about. The seminar is coordinated by Camuso and assistant history professor Carolyn Stefan-

co. Camuso, office administrator for the Academic Senate, said she will look at 30 years of the evolution of women's studies, emphasizing the highlights of its development and content.

Some of the topics Camuso will address are how gender determines our identities and relationships, whether women had a Renaissance and what political structures enforce relationships of power.

"I think the whole series will provide discussion on academic topics concerning women that don't have a forum for discussion at this time," Camuso said.

Women's studies courses were first offered in the United States 21 years ago. In September 1990, Cal Poly joined more than 620 other U.S. institutions in forming a women's studies program.

Camuso supports the academic interest regarding women's studies.

"It's important to share how women see the world, how to discover our culture as women and to become familiar with the consciousness of women through their writings," Camuso said.

Stefanco hopes to broaden people's general perspectives by threading women's roles into history and literature. She said women's studies at Cal Poly has included a minor program which studies women's contributions to various areas of human life and the place of women in history and society.

Stefanco said she wants to develop techniques used at other colleges for use here. Some of these include raising overall

**"It's important to share how women see the world, to discover our culture as women and to become familiar with the consciousness of women through their writings."**

**—Margaret Camuso, speaker, women's studies issues**

awareness about women's studies, encouraging more research in the area and creating a sense of community among staff, faculty and students.

"The way to meet and share interests is what the lunchtime seminar is all about," Stefanco said. "Everyone is invited to attend."

The seminar is free, but lunch is not included. Stefanco said lunch will be available for purchase in the Staff Dining Room or participants can bring their own lunches.

Three or four seminars have been scheduled for each quarter, and Stefanco would like the speakers to reflect what the people of Cal Poly are interested in in terms of women's studies.

Later this quarter, Donald Ryujin, an associate professor in the psychology and human development department, will speak on "Women's Fear of Success: The Myth." Also, Noelle Norton of the political science department will speak on "Reproductive Policy Decisions: The Family Planning Inner Circle."

Ryujin is scheduled to speak Oct. 28. Norton will speak on Nov. 18.

The seminar will run from noon to 1 p.m. in Staff Dining Room B.

## ARTICLE

From page 1

dents often express concern with Cal Poly's low acceptance rate, Penner said. "Parents know how hard it is to get in here, and they're really concerned about their children getting accepted."

One thing left out of the rating system is ethnic diversity on campus. Koob said this is an important issue that should be included in the next study. Penner also expressed concern about that aspect being left out.

"Ethnic diversity is very important to the college setting because it helps people broaden their minds," he said.

The University of California schools were considered under a national category.

## Poly grad used 'learn by doing' to excel in career

By Jane Phillips  
Staff Writer

Richard P. Enfield is living proof that the education offered at Cal Poly enables graduates to excel in their future endeavors.

Enfield is the newly appointed county director for the University of California Cooperative Extension. He also continues to be the 4-H Youth Development Adviser, a position he has held since 1980.

"I chose to attend Cal Poly as an undergraduate because of its hands-on approach," Enfield said.

Both the University of California at Davis and Cal Poly accepted Enfield's enrollment application, but Cal Poly's reputation as a "learn by doing" campus is what drew Enfield to this area in 1977, he said.

"One of my mentors, a person I look up to, is Dr. Joseph Sabol." Sabol is the interim dean for the School of Agriculture at Cal Poly.

"He was my senior project adviser and he really had a positive effect on my life," Enfield said. "We meet two or three times a year to discuss our lives and our goals."

Sabol said, "It's just like Richard to try to pass along the credit of his success to others. I'm really proud of his achievements. He's a great asset to our county."

As the county director of UCCE, Enfield will essentially be the administrator for all

cooperative programs in San Luis Obispo County. He will also serve as liaison with county officials, and is responsible for personnel matters within his department.

As the 4-H Youth Development adviser, he works closely with the community leaders who head the county's 35 4-H groups.

While attending Cal Poly, Enfield had his sights set on teaching. He spent the summer of 1980 at an internship with the UCCE in the 4-H Youth Development department and was scheduled to student-teach at San Luis Obispo Senior High School in its agriculture classes in the fall of 1980.

During that summer, a permanent position became available as the 4-H Youth Development adviser for the UCCE, which he applied for and was hired to fill.

Sabol said, "We thought we'd lost him. The moment I found out, I guess I was disappointed, but in the long run, it's been a real benefit to this county to have someone like Richard in that position."

"He may not be in front of a class with a piece of chalk in his hand, but he has had a tremendous effect on local agriculture and community awareness," he said.

For over 75 years, the UCCE has helped to disseminate information regarding food and fibers, family and consumer sciences, youth development, marine sciences and agriculture to the people of California.

## FIDO program works toward development of Poly faculty

### Skills taught to improve classroom teaching methods

By Jane Phillips  
Staff Writer

Several Cal Poly faculty members have begun meeting every other Tuesday in order to create and exchange new teaching ideas — and to eat a free lunch.

The program, Faculty Instruction Development Opportunity, is a professional development activity sponsored by the Academic Senate Instructional Committee and the vice president for Academic Affairs.

Steven Marx, an associate professor of English and a member of the committee, said about 40 faculty showed up at the first session on Sept. 16.

Marx said many universities have this program or one like it.

"We are hoping this program will be a success," he said. "Probably the main emphasis of this program is that the resources for FIDO are our own faculty."

This program will attempt to increase or improve the teachers' effectiveness in the classroom by sharing and using successful

teaching methods, Marx said.

"Sometimes when you are teaching and doing research, which are unending tasks, you need to be shaken to see other areas of importance," Marx said. "If you are boring yourself in the classroom, then that's the problem."

Students will benefit from these meetings by having professors who are more diverse in skill and have a broader base from which to draw and update their information, he said.

FIDO's activities are designed and implemented by Cal Poly faculty members. The guest speakers for fall quarter are also Cal Poly faculty.

Funding for the free lunch is provided by the Cal Poly Foundation through discretionary funds. This money was not received from the state and therefore can be spent as deemed necessary, said Glenn Irvin, associate vice president for Academic Affairs and administrative representative to the ASIC.

Irvin said the FIDO program has not fallen prey to the budget

dilemma because it draws its funds from sources other than the state.

"The money for the FIDO program, which is approximately \$2,000 for this fiscal year, was previously earmarked for faculty development," he said.

"It's important to understand that the money in the Foundation comes to us from a number of sources, including alumni contributions or donations, auxiliary services on campus such as the bookstore and food services and student fees," he said. "It is a limited source."

Also, Irvin said, this is a program where the students will directly receive the benefits.

Some of the topics to be discussed during the Tuesday sessions will include multicultural perspectives on teaching and scholarships, the construction and use of classroom tests, multimedia and computer-assisted instructional techniques, problems in multicultural classroom communication and some solutions and advice on giving interesting lectures.

## ARVIDSON

From page 8

said. "Since I've retired, everyday is like a Saturday, and I like it."

She also said she is not worried about getting bored during her retirement because she has enough things to do to keep her busy.

At the top of her list are redecorating parts of her home and working in her garden. She said is also looking forward to traveling. "They say travel is broadening, and it is so true. I am excited that I now have the chance to travel again."

One thing Arvidson said she

will miss being informed of the latest campus happenings.

"One thing I won't miss is the drive to work in the winter and on those foggy mornings."

Arvidson said she plans to stay in the area.

"I love this place, and it will have me until I die."

# SLO Police Department preaches bike safety

By Ann Garrett  
Staff Writer

Bicyclists get in trouble when they do something a motorist does not expect them to do, said Sgt. Bruce LaHargoue of the San Luis Obispo Police Department.

LaHargoue stressed the importance of safe bicycling near the Cal Poly campus.

At the beginning of the school year, police officers are posted at locations which are frequent sites of bicycle accidents.

LaHargoue said officers are posted at Foothill and California Boulevards in the mornings. "We ticket the bicyclists going the

wrong way."

Students that live at Stenner Glen ride up the bicycle lane on the wrong side of Foothill and go against the flow of traffic. That causes problems at the intersection of Foothill and California, LaHargoue said.

Also, cars coming out of Mustang Village and turning right do not expect to see bicyclists coming the wrong way.

"We have a major number of collisions there," LaHargoue said.

"We set up at Grand (Avenue) and Slack (Street), too. That intersection is dangerous. Bicyclists run the stop sign com-

ing out of campus. Boom. You have a wreck."

LaHargoue mentioned other trouble spots in that area include the portion of Grand Avenue where the freeway exits into the street.

Most bicycle collisions are not the bicyclists' fault, LaHargoue said. "But a bicyclist really does contribute to his own demise by violating certain laws, like riding on the wrong side of the road and not having the right lighting equipment."

Bicyclists have to obey all the laws that apply to cars, LaHargoue said.

The courts have ruled that a

motorist has a reasonable right to expect that people will be obeying the law.

When passing on the right, if you cannot do it safely, it is against the law. That applies to bicycles in bicycle lanes, LaHargoue said.

It is illegal to ride bicycles while under the influence of drugs or alcohol, LaHargoue said.

Although bicyclists do not by law have to submit to blood, breath or urine tests, they are subject to field sobriety tests. "If people fail field sobriety tests, there is probable cause right there to arrest them," LaHar-

goue said.

There is a \$250 fine for riding under the influence, he said.

Police Officer Rick Crocker said when bicyclists are cited for violating traffic laws, there are alternative programs to going to court and paying a fine.

Three-hour bicycle violator classes are offered through the San Luis Police Department. The classes were instituted in San Luis Obispo approximately a year-and-a-half ago.

Crocker, instructor for the class, said the next class will probably be offered in October.

"We have had approximately 175 students," he said.

## PROTEST

From page 1  
class," said Kristin Bertolina, a student in POLS 100.

Another student said he had to leave the room in search of fresh air because he felt faint from the heat.

Some students said they are unfortunate enough to have more than one class in room 214.

"After three classes in this

room, I have to take a shower afterwards," said Jeff Quarles, a political science junior.

Students were not the only ones complaining of headaches and disruption due to the constant vibrating and rattling of tractors, the "beep, beep, beep" sound of trucks backing up and the pounding of jackhammers.

"Can you hear me?" has be-

come a common question in professor Randall Cruikshanks political science 105 class.

When the answer is no, he whips out his bullhorn which sits on the desk as a constant reminder of the problem.

Not only is noise a continuous problem, but also the heat in the room is unbearable, students said.

## ADVERTISE IN MUSTANG DAILY

**More doctors recommend extra-strength HP.**

DR. O. JOHNSON  
STATISTICS

More and more PhDs across the country are recommending Hewlett-Packard financial and scientific calculators to their students. And for some very strong reasons.

"The HP 48SX Scientific Expandable has powerful graphics tools that are remarkably helpful to students learning mathematical concepts. And with the equation solver feature, it's excellent for applying mathematics to engineering," according to Dr. William Rahmeyer, a professor of civil and environmental engineering at Utah State University.

"The HP Business Consultant II has an equation solver and extensive

math functions. These free the students from computational tedium so they can think and interact on a higher level," says Dr. Lee V. Stiff, a professor of math education at North Carolina State University.

So go check out the HP calculator line at your college bookstore or HP retailer. You'll agree, there's no faster relief from the pain of tough problems.

HP calculators. The best for your success.

## CONSTRUCTION

From page 3

tight time frame for the the asbestos abatement contractors getting in and out of the Business building, he said.

Work on Engineering East was also on a tight schedule. "It was an eleventh-hour contractor move out with moving crews moving in the laboratory furniture and technicians working hard on the deadline," Lebens said.

The new Faculty Offices East was completed in August, and the move-in took place during the last two weeks of August and the beginning of September.

Dairy Science 1 is also progressing nicely, Lebens said. "There were a few little bugs, but they were taken care of," he said. Construction should be complete by next July.

Crews are continuing to work hard on the Recreation Sports

Center. "You don't see much coming of the ground, yet there is an awful lot of work being done. They had to reroute the utilities and telephone cabling," Lebens said.

Peter Phillips, Cal Poly architectural coordinator, said although the center is not scheduled to be completed until July of 1993, "the contractor has a very aggressive work schedule and they are basing their opera-

tion on a year schedule."

Phillips said he knows there have been a lot of changes with this construction since last year, but students need to be patient. Once things settle down, it will be fine and the end result will be worth it, he said.

The child care facility is not really moving along yet. Lebens said there are some delays with the approval of the drawings.

Overall, Lebens said the con-

struction should not get in the way of classes. He said, however, that there has been some concern with the noise caused by the construction of the Business Administration building.

"It's kind of exciting to see it all unfold. I'm very pleased with the effort put forth by the operations staff."

All current construction should be complete by the summer of 1993.
